

SVM NOG optimistic ablation: epsilon curves at matched budget checkpoints

latest NOG-ZO NOG-opt NOG-non-opt

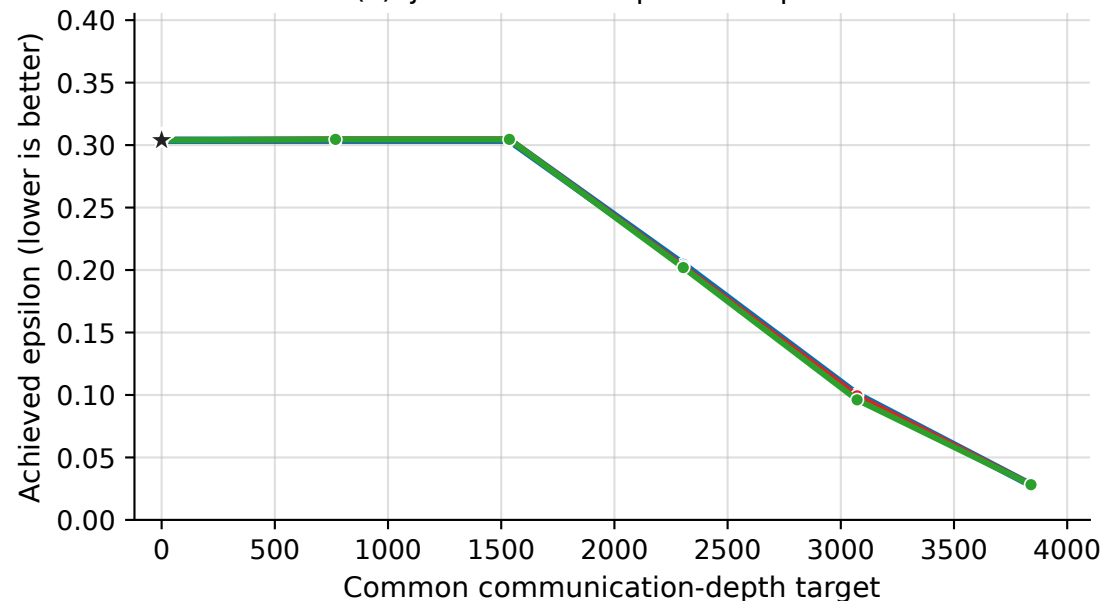

(a) a9a: same depth checkpoints

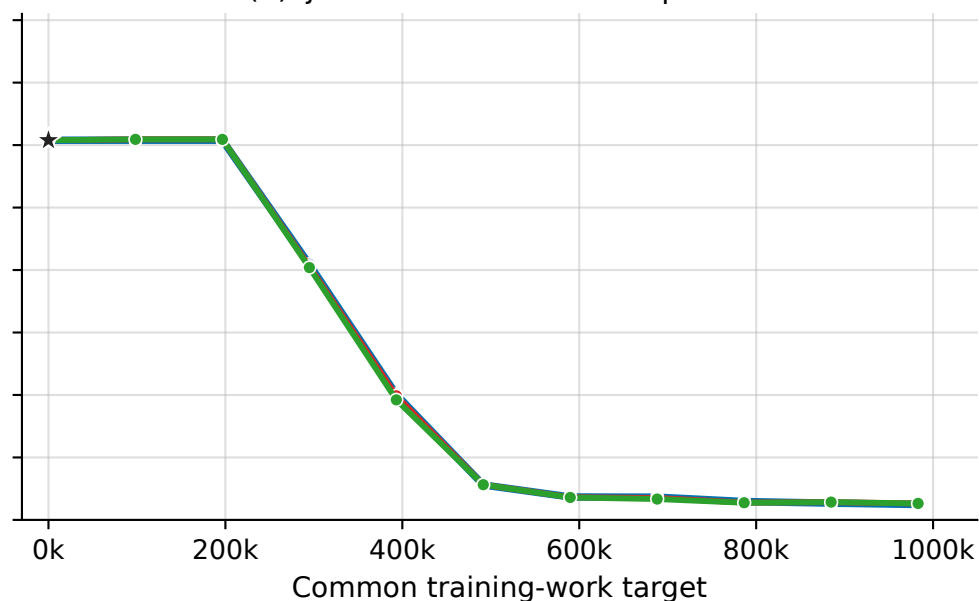

(b) a9a: same work checkpoints

(c) ijcnn1: same depth checkpoints

(d) ijcnn1: same work checkpoints

Lines: 20-seed means; shaded bands: 95% CI; nearest native checkpoints only; no interpolation. Maximum native mismatch: 3 depth, 384 work. The black star is the common initialization reference from latest NOG-ZO.
